

TEMPLOG ONE

Product Description

Specially designed to log temperatures during the distribution of temperature-sensitive products like fresh fruits and vegetables, fish and shellfish, meat, dairy products, medicine, etc.

An internal sensor records the ambient temperature along with the time with rigorous precision.

Easy to use, compact, and with quick start and operating options.

It is the only device that transfers data to a web environment. If you wish, you can send your Templog One data to our server by clicking on 'SEND TO THE WEBSITE'. You can then access your data at any time for free from a computer with an internet connection, simply by entering the serial number of the device in the 'DATA TRACKING' form on our website. Several users can access the same device data at the same time using the same serial number.

Templog One allows you to change the configuration of the device before starting the registration process. You can change the record duration, start delay, maximum and minimum temperature, upper and lower alarm thresholds, etc.

Industries Served

- Food & Beverage
- Healthcare
- Pharmaceutical
