

ACTIVATED CARBON

Product Description

An excellent adsorbent, Activated Carbon (also known as Activated Coal, Activated Charcoal, Active Carbon, Actival Coal, or Active Charcoal) is a highly porous substance for the purification treatment of water, air, and gases, as well as odour control.

With a large surface area of 800 to 1,200 m² per gram, Activated Carbon is a cost-effective way to treat large volumes of gas or water that have a low concentration of contaminants. Adding on to that, Activated Carbon, being made from natural coconut shells, can be used in food production and industrial processes.

Industries Served

- Air filtration industries
- Electronics
- Food Production
- Healthcare
- Pharmaceuticals
- Waste water treatment

Key Features

- Can be used in both food productions and industrial processes
